## SAW VISES & LUBE

[www.csidesigns.com](http://www.csidesigns.com) • [www.csidesigns.com](http://www.csidesigns.com) • [www.csidesigns.com](http://www.csidesigns.com)

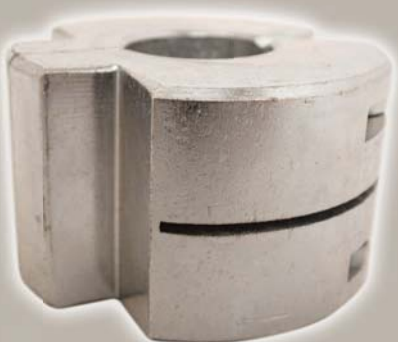

CSI offers only the best cutting blades for your orbital tube and pipe saws. Our blades are made of the highest caliber tool steel, and testing shows that they last longer than other manufacturers' blades.

When your tube cannot be taken down to be cut, try using CSI's two-piece designed saw vise. Simply clamp the vise around your tube or pipe, and the slot will guide your saw blade straight through the tube. The saw blocks will create a square, flat cut, minimizing weld preparation.

To extend the life of your blades, try CSI's new blade lubricant. Our lube is safe to use on sanitary process piping, and it is water-soluble. MSDS sheets are also available.

### SAW VISE

## Cutting Blades, Saw Vises and Lube

### ORBITAL CUTTING BLADE SIZES

PART NUMBER	PIPE WALL THICKNESS
CSI035	Up to .083
CSI048	.083 to .250
CSI072 (Extends range of saw one tube size)	Up to .083

Note: All dimensions are in inches.

CSI offers saw vises in both tube and pipe sizes one-inch through four-inch. The two-piece design is ideal for creating accurate square cuts and minimizing pre-weld preparation.
